The raw materials that we use are in full harmony with the environment. They are the highest quality available in the international and domestic market. **The cement, iron, tiles and other construction materials come from Italy, certified with European Union standards.**
The bricks are a domestic product of EU standards.

In our business we have the opportunity to express our love and respect for our country, Albania, for our town, Vlora, by using in our buildings only materials with guaranteed quality that respect the environment of our town. Because we live here as well, together with our children and breathe the same air as you.
