

We love the breeze of our sea, our salty wave and our sunshine in this country! And nobody better than us, “**Çobo construction**”, can convey them within your house. There’s no need for the nature to come to you: we have brought it into your house through our design concepts and the construction techniques of Albanian tradition mixed with modern elements of contemporary architecture.

- We breathe the same air as you!

We live here, in Vlora, together with our children. We wish that our nephews live here too. And, like we inherited from our ancestors a marvellous nature, we feel obliged to give it to our children and nephews as we received it:

- Clean and beautiful!

For this reason, the policy of our company prohibits without compromise any material that damages the land, the plants and the sea we inherited.

Of course, the development and growth of the company was achieved by having the philosophy of value preservation and protection, but the success would not be guaranteed if its constructions would not be:

Multifunctional

Devised and designed for being a multifunctional building, offering a perfect choice not only for your business, but also for your place of living.

Modern

Building with solid fundamentals is not enough! The fantastic combination of the building quality with a modern design guarantees the success.

Comfort

A success that starts with a quality building, a modern design and finalized with the comfort of the service and living spaces.
